ReadMe: Installation of the Latest Printer Driver

06/05/2007

Follow the procedures below and install the new Printer Drivers and Tools.

For Windows 2000 / XP users:

Refer to "3-3. Preparing your PC" in Basic Operation Manual or Instruction Manual.

<Note>

If you install the latest Printer Drivers and Tools to the PC where the former version has already been installed, the message to confirm uninstallation appears. If you click "Yes", uninstallation starts to uninstall the necessary tools but Printer Driver(s) is/are not uninstalled but can be overwritten by installation.

If uninstallation fails, a dialog box appears "Uninstallation of the former version failed. Do you want to continue installing the new version?". Click [No] and quit the installer. Open "Add or Remove Programs" of Control Panel and remove "Brother GT-Tools". Then start the installation from the beginning.

For Windows Vista users:
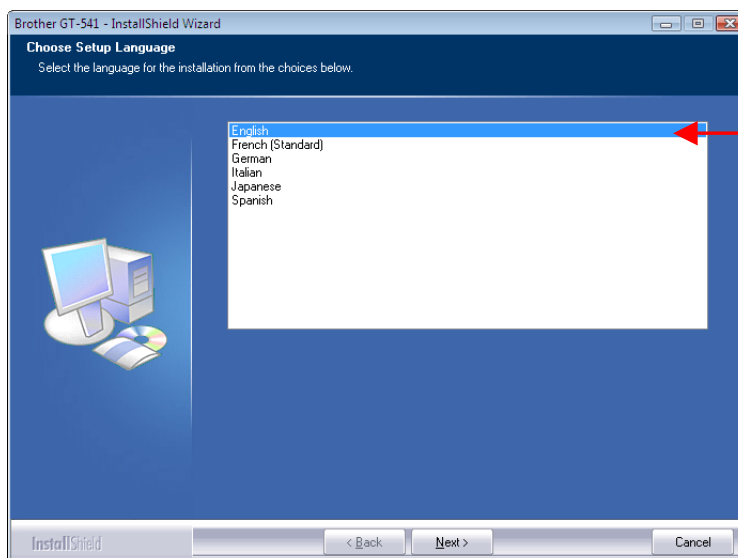

Follow the instruction below.

(1) Open "GT541Setup" folder.

(2) Double-click "Setup.exe" and the installation of Printer Driver and Tools starts.
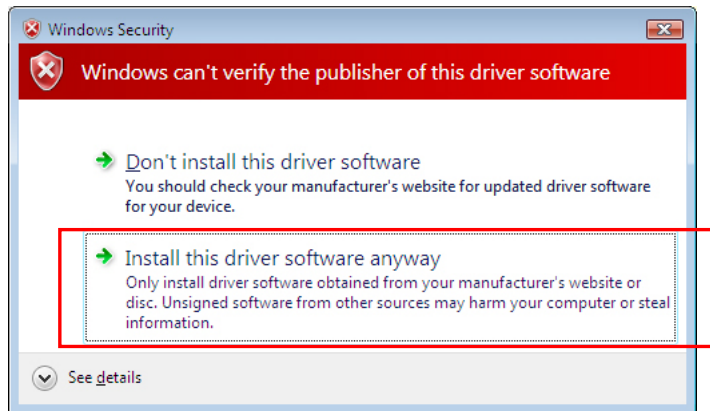

<Note>

When the former version is installed, uninstallation starts. After the uninstallation is done, double-click "Setup.exe" again and start installation.

(3) Select the language indicated in Printer Drivers and Tools.

GT-541

(4) During the installation, the following warning appears. Click "Install this driver software anyway" and continue.

(5) After installation, your PC will need to restart. Remove your Install CD and restart your PC. If you are going to use your printer without connecting it to your PC, this will be the end of PC preparation.

Connection with USB 2.0 Cable

(1) Connect the USB 2.0 cable to your printer (power OFF).
(2) Connect the other end of the USB 2.0 Cable to your PC.
(3) Turn on your GT-541 printer. Installation starts automatically. The information appears at the right bottom of the PC monitor.
(4) After installation, open "Printers" in "Control Panel" of PC.
(5) Click either "Brother GT-541" or Brother GT-541 FileOutput icon and select "Set as Default Printer" on "File" menu. "Brother GT-541" icon is checked and Brother GT-541 is set as the default printer. This will help to do the layout with your application software. The PC setup is now completed.

Installing "Useful Tools"

(1) Open the "UsefulTools" folder in GT541Setup folder.
(2) Double-click the html file by the language selected. Follow the instruction and install Useful Tools.

English	UsefulTools_Eng.html
German	UsefulTools_DEU.html
French	UsefulTools_FRA.html
Spanish	UsefulTools_ESP.html
Italian	UsefulTools_ITA.html

<Note>

If you cannot install Useful Tools from the html file above, move out "Useful Tools" folder from "GT-541Setup.zip" folder. Sometimes OS may automatically compress the files in ".zip" folder (depends on OS function settings). Or copy the files directly from "Useful Tools" manually.
